

Onero Licensee Equipment Starter Kit V3.0

The following is a list of equipment. You do not need to purchase this exact brand or model. An alternative brand to perform the same duty is perfectly acceptable. You can always google image the equipment listed to get a better idea of what it looks like.

This is the bare minimum to allow 6-8 people to train comfortably. Increase purchasing weights and bars and maybe an additional squat rack as you increase your numbers. Some standard bars and weights will be helpful.

Description:	QTY:
Force USA Squat Stands – Half (picture attached) Used for squats, presses and drop-chins.	2
OR	
Single squat racks (for easier storage if you are renting or sharing space)	2 x 2

Making your own wooden weight (technique) plates

At The Bone Clinic we have made our own wooden-starter “bumper” plates which weigh about 100 grams.

- A) The standard Olympic size plate is 420 mm in diameter with a centre hole diameter of approximately 51 mm. We have plates this size that can fit both a standard bar with a centre hole diameter of approximately 29 mm and the Olympic bar with a centre hole diameter of 51 mm (pictured).

They are made out of 12-14 mm thick Plywood direct from Bunnings.

- B) We also have 470 mm diameter starter plates with a centre hole diameter of 29 mm. These are made for a standard bar. They raise the bar a further 50 mm up the person’s shin. Perfect for clients with hip-mobility limitations.

They are made out of 20 mm thick Plywood direct from Bunnings.

- C) And we have 520 mm diameter starter plates with a centre hole diameter of 29 mm. These are made for a standard bar. They raise the bar 100 mm up the person’s shin from the standard bumper plates. Perfect for clients with both hip-mobility and movement pattern issues.

They are made out of 20 mm thick Plywood direct from Bunnings.

Another great thing about these wooden bumpers is that you can add *change* plates to them. *Change* plates are also known as fractional or micro plates and are weight plates made in smaller sizes ranging from 0.25 kg through to 5 kg.
